EEG/EP

KEY FEATURES:

Single patient packs now available

For improved workflow and convenience, 15, 23, 25 and 27 lead packs are now available.

Best patient care

Single-use minimizes risk of cross-infection, giving peace of mind to medical staff and the best care for patients.

Easy to use

Disposable sensors ensure the convenience of not having to clean after use. Color-coded lead wires allow easy recognition of each electrode.

Reliable recordings

Superior Silver/Silver Chloride sensor ensures a stable signal for reliable recordings every time.

Time saving

Fixation ridges on the dome result in a firmer grip and allow the electrodes to be twisted into position, saving time for the user during patient hook-up.

M- connector - 1.5mm and molded connector

MRI EEG Cup Electrodes

The Ives single-use MR Conditional cup electrodes are being distributed by Ambu. These electrodes are FDA 510(k) cleared K171102. They are approved for use in a 1.5T and 3.0T environment. They have an easy and efficient connection to the harness cable and are available in 21, 23, 25 and 27 lead configurations. The soft cup MR single-use electrodes help to reduce the possibility of skin breakdown.

Fully Single-Use MR Conditional Cup Electrodes with Disposable Harness

Item no.	Description	Cup length (in.)	Harness length (in.)	Quantity

EEG PRODUCT APPLICATION

Ambu® Neuroline™ 700

The Ambu Neuroline 700 solid gel surface electrode features a high-quality Silver/Silver Chloride sensor ensuring optimal signal quality. The Neuroline 700's strong, yet skin-friendly solid gel is designed to provide a secure hold with the ability for repositioning.

Electrode Size
20mmx15mm

Ambu Neuroline 720

The Ambu Neuroline 720 is a self-adhesive, oblong-shaped electrode featuring a highly conductive wet gel for an instant signal. The 720 fits well around the eyes and under the chin, making it easy to use in the facial area and on children. The strong adhesion will adhere through sweat, hair, and skin oils. The 720 electrode is available with an offset press-stud or with a choice of pre-attached lead wires and several different connectors to match most equipment.

EEG ACCESSORIES

Vinyl Coated Tape Measure - 29401

Skin Prepping Gel - 18223

Ten20™ Conductive Paste - 18273

Ordering Specifications for EEG Accessories

Item no.	Description
29401	150cm (60") Vinyl coated tape measure. Easy retracting button. One per pack.
18223	Quick and easy to use to improve skin conditions for adhesion of electrode or to improve/reduce skin impedance. Three 4 oz tubes per pack.
18273	Water soluble for quick and easy clean up. Three 8 oz jar per pack.

EMG/NCS ELECTRODES

Ambu Neuroline Ground Electrode

Electrode Size
45mmx30mm

The Ambu Ground Electrode is a solid gel, disposable ground electrode. The Ground Electrode features a convenient pull tab for easy relocation and a green tangle-free wire with a 1.5mm touch-proof connector.

NEUROLINE TRANSPARENT SURFACE ELECTRODES

KEY FEATURES:

High-quality

High-quality Silver/Silver Chloride sensor gives you an optimal signal quality.

Repositionable

Strong, yet skin-friendly solid gel enables you to reposition the electrode.

Easy identification

Available with color-coded lead wires for easy identification in a green/red/black combination.

Precise placement

Transparent sensor area allows precise sensor placement over the target area.

Time saving and cost effective

Eliminating the need to clean products between procedures, you can use the same electrodes throughout the entire EMG/ NCS procedure.

Ambu Neuroline 715

The Ambu Neuroline 715 self-adhesive electrodes allow you to perform the entire NCS using one set of electrodes. Solid gel is ideal for strong adhesion throughout the repositioning of electrodes. Utilize one of four lead wire lengths for optimal performance. Single patient use only.

EMG/NCS PRODUCTS

Neuroline Concentric Needle

Ambu Neuroline Concentric Needles, for single-use, have been carefully manufactured to give you the greatest possible confidence and reliability. Precision centering of the inner Silver core provides accurate and reliable signals.

Neuroline Monopolar Needle

Ambu Neuroline Monopolar Needles are made of coated stainless steel and feature an ultra-sharp, beveled tip, which ensures low friction at the point of insertion. Ambu Neuroline Monopolar Needles are available both with and without a pre-attached lead wire.

Neuroline Inoject Needle

Ambu Neuroline Inoject Needles are designed to give you the confidence and reliability you need when injecting Botulinum Toxin. They are made of stainless steel and feature a smooth coating with a back-cut, beveled tip. Ambu Neuroline Inoject Needles are equipped with a standard Luer-Lock fitting to guard against leaks at the syringe connection. Ambu Neuroline Inoject Needles come complete with a pre-attached lead wire, offset to minimize interference with the syringe.

NEUROLINE CONCENTRIC NEEDLES

KEY FEATURES:

Accurate and reliable recordings

Ambu's superior robotic production method incorporates a unique control system that ensures each and every concentric needle uniformly receives a high signal quality with low impedance. Precision centering of the inner Silver core ensures recordings are both accurate and reliable.

Expertly designed

The needles are outstandingly sharp for smooth skin penetration. The cannula has a silky smooth surface for reduced friction when inserting the needle, and moving the needle in the target area.

Easy and secure handling

The hub is ribbed and slightly contoured so it can be firmly and comfortably held between the thumb and index finger.

Ease of use

Orientation-free connection to Ambu Neuroline Concentric cables make the Neuroline Concentric Needles easy to use.

NEUROLINE MONOPOLAR NEEDLES

KEY FEATURES:

Expertly designed

Beveled tip with superior sharpness has been designed for low penetration resistance. The needles have an ultra-smooth coating which reduces friction when inserting the needle and moving the needle in the target area.

Easy and secure handling

The design of the ribbed and ergonomically shaped hub allows easy and secure handling.

Convenient sizes and configurations

Available with or without a 76cm (30") pre-attached lead wire for your convenience. Choice of five convenient sizes.

NEUROLINE INOJECT NEEDLES

KEY FEATURES:

Expertly designed

The sharp beveled-cut tip is ideal for easier insertion. The Inoject Needle is made from stainless steel with an ultra-smooth coating to minimize friction.

Safe and secure connection

The needle hub has a secure Luer-Lock fitting that provides a secure connection to the syringe, offering safety for both you and your patient. The Inoject Needles come with a pre-attached lead wire with a touch-proof safety connector for secure needle handling.

Improved control

The Inoject Needle has an ergonomic hub with an index mark for improved injection control.

MYOGUIDE

KEY FEATURES:

Accurate and reliable recordings

Designed to amplify electrophysiological signals from muscle and provide video and audio feedback to assist clinicians in locating areas of muscle activity.

EMG injection guidance

Provides muscle and nerve localization information, to accurately guide and monitor needle electrode insertion, and/or injection of neuromodulator drugs, into a muscle.

Easy and secure handling

Large LCD display provides the complete system status at a glance. EMG audio, EMG signal display, EMG RMS Value, integrated EMG signal strength and stimulation capability, increase efficacy for injection point localization. The simple control panel is intuitive and easy to operate.

Ease of use

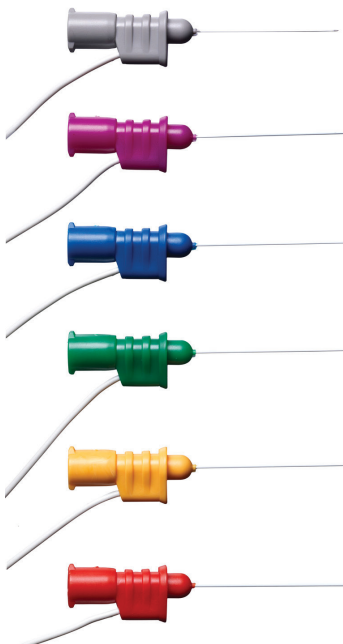

Myoguide operates in two modes: EMG and Stimulation. EMG and Stimulation modes can easily be paused for repositioning of the patient or electrodes. The default mode, EMG, records electromyographic (EMG) signals from electrodes placed on the subject. The second mode, Stimulation, enables MyoGuide's onboard stimulator to stimulate through the needle electrode that was used to record the EMG.

**NEUROLINE
INTRAOPERATIVE
MONITORING (IOM)**

IOM PRODUCTS

Superior Reliability for Every Situation

- Our subdermal needles provide superior reliability, strength and flexibility, matched only by our probes that provide accurate and selective stimulation.
- Our electrodes are designed with you in mind and ensure low noise and impedance levels, consistent recording capabilities, and convenient and sterile packaging. The single-use solution provides a smooth workflow during surgery.
- Highest levels of patient care in mind with softer leadwires and stable surface electrodes even during movement.

**Neuroline
Twisted Pair
Subdermal
Needles**

**Neuroline
Subdermal
Needle**

**Neuroline Corkscrew
Electrode**

Since 1971,
we have been
leading the way
in the design and
development of
**high-quality,
single-use electrodes**
for accurate monitoring.

Ambu's IOM products feature a 1.5mm touch proof connector to fit all standard intraoperative monitoring equipment.

STIMULATION PROBES

Disposable Triple and Double Hooked Probes

The double and triple hooked probes consist of two or three hooked tips which are insulated up to the 90 degree angle hooks, with 4mm exposed tips. The probe is designed to be used to stimulate nerve action potentials. It may only be used in contact with cranial, peripheral, and spinal nerve roots.

Disposable Concentric Probe

The stimulating Concentric Probe is the most accurate of the three disposable probes, calculated to about 0.5mm when stimulating through layers of tissue. In order to stimulate through any tissue covering the nerve, the current must be increased.

Disposable Bi-Polar Probe

The stimulating Bi-Polar Probe will stimulate through a small amount of tissue and remain accurate. Current is passed between the two probe tips, localizing the current to the probe site as well as the adjacent tissue.

Disposable Monopolar Probe

The stimulating Monopolar Probe is intended for stimulating across the bulk of a tumor to determine whether a nerve is lying behind a structure, and is not designed for accurate and selective nerve stimulation. However, accuracy can be improved by inserting a ground electrode as close as possible to the surgical area while using the minimum current that will stimulate the nerve. Ground electrode required.

Disposable Pedicle Screw Probe

The Pedicle Screw Probe has a fully Teflon insulated shaft terminating in a 3mm ball tip. The Pedicle Screw Probe is ideal for testing pedicle integrity after creating the pilot hole for the pedicle screw which will determine whether the pedicle is breached.

ELECTRODES – SUBDERMAL NEEDLES

Ambu Neuroline Subdermal Needles 745

The Ambu Neuroline Subdermal Needles are made of solid stainless steel, a superior combination of strength and flexibility. The Subdermal Needle's ultra sharp lancet cut tip are designed for easy skin penetration, low noise and impedance levels. The color-coded wires with a 1.5mm touch-proof safety connector make the Subdermal Needles the ideal working tool.

SLEEP

Electrode Placement for Sleep Studies

EEG

Ambu Neuroline 726 – Cup Electrodes

The Ambu Neuroline single-use cup electrode assures a 100% uniform signal quality, 100% of the time.

AASM recommends:
 F4-M1 (back-up F3-M2)
 C4-M1 (back-up C3-M2)
 O2-M1 (back-up O1-M2)

EMG

Ambu Neuroline 720 – Surface Electrodes with Wet Gel

Ambu Neuroline Surface electrodes with wet gel give instant and accurate signals, combined with reliable adhesion.

Ambu Neuroline 700 – Surface Electrodes with Wet Gel

Ambu Neuroline 700 is a solid gel electrode with a size compatible for infants and children.

AASM recommends:
 Two electrodes around the eyes (EOG).
 Three under the chin (EMG) Legs (EMG).
 • Both legs should be monitored.
 • Preferred separate channels.
 Electrodes placement: 2-3cm apart or 1/3 the length of the anterior tibialis muscle, whichever is shorter.

ECG

Ambu BlueSensor M/R/SP – Ambu BlueSensor Electrodes

Ambu BlueSensor ECG electrodes are patient-friendly, reliable electrodes that ensure a flawless ECG signal.

AASM recommends:
 Lead II - Left lead (positive lead) placed on the torso parallel to the left hip at about the 8th intercostal space.
 Right lead (negative lead) placed on the torso parallel to the right shoulder just below the clavicle.

SP Electrode
38mm diameter

R Electrode
48mm diameter

SINGLE-USE ELECTRODES FOR PSG

KEY FEATURES:

Best patient care

Single-use means the risk of cross-infection is minimized, giving peace of mind to medical staff and the best possible care for patients.

Easy to use

Disposable sensors ensure the convenience of not having to clean after use. Color-coded lead wires allow easy recognition of each electrode.

Reliable recordings

Superior Silver/Silver chloride sensor ensures a stable signal for reliable recordings. Each cup electrode has an intact Silver/Silver chloride layer that ensures a clear signal every time.

Time saving

Fixation ridges on the dome result in a firmer grip and allow the electrodes to be twisted into position, saving time for the user during patient hook-up.

Ambu Neuroline Disposable EEG Cup Electrodes

The Ambu Neuroline single-use cup electrode ensures a 100% uniform signal quality, 100% of the time. Not only that, departmental efficiency is improved as time is not wasted by processing and cleaning reusable cup electrodes.

SINGLE-USE ELECTRODES FOR PSG

KEY FEATURES:

Excellent trace quality

The BlueSensor design with offset connector and wet gel ensure clear recordings for a precise diagnosis.

Superior adhesion

BlueSensor electrodes have an excellent adhesive, so they stay securely in place throughout the procedure, even when the patient is sweating and moving.

Fast and easy to use

The soft foam backing material is gentle on the skin, and allows fast and easy placement and removal of electrodes.

Ambu BlueSensor

Ambu BlueSensor ECG electrodes are patient-friendly, reliable electrodes that ensure a flawless signal.

Ordering Specifications

Item no.	Quantity per pack
R-00-S/10	10
R-00-S/25	25
SP-00-S/10	10
SP-00-S/50	50

Minimum order: Packs

SP Electrode
38mm diameter

R Electrode
48mm diameter

The AASM recommends using two electrodes around the eyes and three under the chin.

Ambu Neuroline 720

Ambu Neuroline 720 has an oblong-shaped wet gel electrode. The 720 fits well around the eyes and under the chin. The strong adhesion will adhere through sweat, hair and skin oils.

Electrode Size
30mmx22mm
