

DATASHEET

Ambu® has always focused on sustainability with the aim of creating real value for society at large through the company's products. We are also dedicated to sustainability initiatives based on the principles of the UN's Global Compact and fully support the United Nations Sustainable Development Goals (SDGs).

We are committed to setting the standard for sustainability in single-use medical devices – here's how.

Ambu is partnering with a disposal management company to provide you with a landfill alternative, enabling you to collect single-use endoscopes in conveniently located, designated bins.

Simply ship full containers using a pre-paid packaging system. Metals are processed in three stages while plastics are treated with a waste to energy conversion process.
